In addition to his three textbooks, which together have appeared in 30 editions, he is the author of STORIES FROM THE

SKELETON: BEHAVIORAL RECONSTRUCTION IN HUMAN OSTEOLOGY (1999, Gordon Breach Publishers), as well as numerous articles in research journals. Lynn Kilgore earned her Ph.D. from the University of Colorado, Boulder, where she now holds an affiliate faculty position. Her primary research interests are osteology and paleopathology. She has taught numerous undergraduate and graduate courses in human osteology, primate behavior, human heredity and evolution, and general physical anthropology. Her research focuses on developmental defects as well as on disease and trauma in human and great ape skeletons. Wenda Trevathan is regents' professor (emerita) of anthropology at New Mexico State University, where she taught from 1983 to 2009. She is a biological anthropologist whose research focuses on the evolutionary and biocultural factors underlying human reproduction, including childbirth, maternal behavior, sexuality, and menopause. Her primary publications include works on the evolution of childbirth and evolutionary medicine. Her most recent book is *ANCIENT BODIES, MODERN LIVES: HOW EVOLUTION HAS SHAPED WOMEN'S HEALTH* (2010, Oxford University Press). She has taught courses in physical anthropology, nutritional anthropology, medical anthropology, evolutionary medicine, and anthropology of reproduction. Russell L. Ciochon is a leading paleoanthropologist specializing in primate and human evolution in Asia, as well as the geochronology of Asian Plio-Pleistocene sites. He earned his Ph.D. from the University of California, Berkeley, and teaches at the University of Iowa, Iowa City, where he is Chair of the Department of Anthropology. He teaches courses in hominin and non-human primate evolution, as well as primate behavior, ecology, and functional anatomy. Besides co-authoring more than one hundred technical articles, he has also co-written two popular books: *DRAGON BONE HILL: AN ICE AGE SAGA OF HOMO ERECTUS* (2004, Oxford University Press) and *OTHER ORIGINS: THE SEARCH FOR THE GIANT APE IN PREHISTORY* (1990, Bantam Books).

Excellent.

This book along with some others I have purchased here on give my grand daughter and myself a better understanding of where we all came from and how we continue to evolve This is a college level book It is a bit heavy reading for an elementary school girl but together we break it down to her level. Now she still has this book for a review and comparison with future discoveries in the future.

Needed it for a class. Usually I just borrow books from the school's library, but once I opened the book I knew I wasn't going to be able to scan this easily. There is so much information everywhere

but it's easy to follow. If you are a visual person, you will probably enjoy this textbook because it's colorful and filled with images and graphs. Great to have for reference!

It has tons of information. Easy to read for any college student without all the rubbish information you will not need. Excellent images, diagrams, and timelines. The index could use some work but that's not a big issue.

It's what I needed.

I feel that one of the goals of this text is to get students thinking about data interpretation. It encourages them to use critical thinking when reading competing theories of our evolution. As a whole I like this text. I have used for my classes for years. I do not always agree with all the details presented, but I feel it gives me an opportunity to present alternative views. This title is very clear and very up-to-date. New additions come out regularly with updates on new fossils and theories. I would recommend this to other instructors looking for a college level text for adoption.

Other besides not having a tracking number to track, it was a great price and product.

Well-written, well-organized, and informative. I purchased this as a textbook for a college course, but I really appreciated the content as well.
