# The Environment And You (2nd Edition) - Standalone Book

## Synopsis

Note: You are purchasing a standalone product; MasteringEnvironmentalScience does not come packaged with this content. If you would like to purchase both the physical text and MasteringEnvironmentalScience search for ISBN-10: 0321957768/ISBN-13: 9780321957764. That package includes ISBN-10: 0134011058/ISBN-13: 9780134011059 and ISBN-10: 032195789X/ISBN-13: 9780321957894. MasteringEnvironmentalScience should only be purchased when required by an instructor. xxxxxxxxxxxx For Introductory Environmental Science Courses (Non-Majors). Inspiring Students to Explore New Frontiers and Local Solutions The Environment and You, Second Edition, by Norm Christensen and new co-author Lissa Leege, gives today's generation of students reason to be hopeful about environmental challenges by emphasizing the role that science plays in environmental problem solving and solutions. The text offers a solid foundation in the science and demonstrates the role that science can play in influencing personal, community and global environmental issues. The new edition has added New Frontiers discussions that emphasize the interaction between new scientific discoveries, ethics, and policy; and Where You Live activities that invite students to use primary data sources to explore environmental principles and issues in their local community. A new chapter organization also improves connections between chapters and integrates key concepts with relevant environmental issues.

## Book Information

Paperback: 704 pages

Publisher: Pearson; 2 edition (January 8, 2015)

Language: English

ISBN-10: 032195789X

ISBN-13: 978-0321957894

Product Dimensions: 9.6 x 1 x 10.8 inches

## Customer Reviews

Lissa Leege is a Professor of Biology and the founding director of the Center for Sustainability at

Georgia Southern University. She earned her undergraduate degree in Biology from St. Olaf College and received her Ph.D. in Plant Ecology at Michigan State University. Her ecological research concerns threats to rare plants, including the effects of fire and invasive species on endangered plant populations and communities. She has also conducted 20 years of research on the impacts of invasive pines on the sand dunes of Lake Michigan and the subsequent recovery of this system following invasive species removal. Lissa was instrumental in the development of an Interdisciplinary Concentration in Environmental Sustainability for undergraduates at Georgia Southern. Under her direction, the Center for Sustainability engages the campus in an annual "No Impact Week" and reaches the community with an annual GreenFest celebration, as well as a robust sustainability speaker series. Lissa is involved with the environment on a statewide level as a member of the 2013 Class of the Institute for Georgia Environmental Leadership and a founding member of the Georgia Campus Sustainability Network. She serves on a local tree board, and as a board member for Georgia Southern's Botanical Garden. Lissa has taught non-majors Environmental Biology for 16 years with an emphasis on how students can contribute to environmental solutions. In 2006, she established an Environmental Service Learning project, through which thousands of Environmental Biology students have engaged in tens of thousands of hours of environmental service in the local community. Lissa was honored with both college and university service awards and has served as a faculty fellow in Service-Learning. She also teaches Principles of Biology, Biology of Plants, and graduate level sustainability courses, as well as Study Abroad sustainability courses in Italy. Her contributions to this book have been inspired by her passion for engaging students in positive solutions to environmental problems.

Author Norm Christensen is not only a world-class scientist (elected Fellow of the American Association for the Advancement of Science, is the founding dean of the Nicholas School of the Environment, and served as president of the Ecological Society of America) but is also a gifted and dedicated teacher who has taught the introductory environmental science course for over 15 years and won a Distinguished Teaching Award. He grew up in Fresno, California and received his AB and MS from California State University, Fresno. His PhD is from University of California, Santa Barbara and his research experience spans community ecology, disturbance and succession, ecosystem management, sustainable forest management, and forest fires. He is a professor at Duke University.

**AWARDS AND HONORS:** 1977 Duke Endowment Award for Teaching Excellence 1989 E.V. Komarek Lecturer, Tall Timbers Fire Ecology Conference 1991 A. Starker Leopold Award, National Park Service • Yellowstone 1991 Distinguished Teaching Award, Trinity College of Arts and Sciences, Duke University 1993 Fellow,

Was ok.

This book was not written very well. I've read a lot of text books in my life, but this one takes the cake. While a lot of the information in it was informative, it was presented in a way that was frankly boring. The way in which chapters were written was bland. Reading this book was an exercise in

dedication, yielding no joy in the results. The way pages are set up in the book make them difficult to read for a long period of time. If I could make a suggestion to the authors and publisher of this book, I would tell them to start by looking at the font used to make the book. Times New Roman works in some cases, but for a book of this magnitude, not so much. The words just run together. A very difficult book to read overall.

Good book. Just as described.

Very informative!

good

Excellent Condition

For school

new
