Customer Reviews

Gr 7-9-Three up-to-date titles presented in an accessible format. Full-color pictures and graphics allow readers to focus on information they will need for reports, while fact boxes and anecdotes keep them engaged. These are dependable resources to help readers understand the history, social issues, global impact, and the complexities of each topic.-Joanna K. Fabicon, Los AngelesPublic Library (c) Copyright 2011. Library Journals LLC, a wholly owned subsidiary of Media Source, Inc. No redistribution permitted.

Combining detailed up-to-date science from authoritative sources with personal profiles of kids today and what they eat, these titles in the Nutrition and Health series offer up serious, hot-button issues for teens to talk about in the classroom and at home. Genetically Modified Foods, the most technically dense title, could do with some diagrams to put alongside the open discussion of important daily life issues, including whether GM foods are safe, environmentally friendly, and a savior for malnourished nations. The series's inviting design, with quality color photos of modern teens, as well as graphs and diagrams, will draw YAs both for personal interest and for curriculum research, while the spacious back matter includes detailed chapter notes and current accessible websites, such as the Center for Science in the Public Interest. Grades 7-12. --Hazel Rochman
