The Evolution Underground: Burrows, Bunkers, And The Marvelous Subterranean World Beneath Our Feet

Synopsis

What is the best way to survive when the going gets tough? Hiding underground. From penguins to dinosaurs, trilobites, and humans, Anthony Martin reveals the subterranean secret of survival. Humans have $\tilde{A}\phi\hat{a}$ $\neg \hat{A}$ "gone underground $\tilde{A}\phi\hat{a}$ $\neg \hat{A}$ for survival for thousands of years, from underground cities in Turkey to Cold Warâ⠬⠜era bunkers. But our burrowing roots go back to the very beginnings of animal life on earth. Without burrowing, the planet would be very different today. Many animal lineages alive nowA¢â ¬â ¢including our ownA¢â ¬â ¢only survived a cataclysmic meteorite strike 65 million years ago because they went underground. On a grander scale, the chemistry of the planet itself had already been transformed many millions of years earlier by the first animal burrows, which altered whole ecosystems. Every day we walk on an earth filled with an under-ground wilderness teeming with life. Most of this life stays hidden, yet these animals and their subterranean homes are ubiquitous, ranging from the deep sea to mountains, from the equator to the poles. Burrows are a refuge from predators, a safe home for raising young, or a tool to ambush prey. Burrows also protect animals against all types of natural disasters: fires, droughts, storms, meteorites, global warmings¢â ¬â ¢and coolings. In a book filled with spectacularly diverse fauna, acclaimed paleontologist and ichnologist Anthony Martin reveals this fascinating, hidden world that will continue to influence and transform life on this planet. 16 pages of illustrations

â⠬œDigs into the subterranean strategies of prehistoric and contemporary animals, from insects to giant sloths and, to a lesser extent, humans. Offers subtle clues that help shift the dramatic

narrative of prehistoric life forward. Underground warrens enable lungfish to survive drought, iguanas to weather hurricanes, and alligators sit out wildfires. \tilde{A} ¢ \hat{a} $\neg \hat{A}^{\bullet}$ - The Economist \tilde{A} ¢ \hat{a} $\neg \hat{A}^{\circ}$ An unbelievably engaging book. \tilde{A} ¢ \hat{a} $\neg \hat{A}^{\bullet}$ - Choice \tilde{A} ¢ \hat{a} $\neg \hat{A}^{\bullet}$ Martin is an amiably erudite guide to burrowing fauna. Anthony J. Martinà is a Professor at Emory University, a paleontologist, geologist, and one of the worldââ \neg â,¢s most accomplished ichnologists. He is the co-discoverer of the first known burrowing dinosaur, found the oldest dinosaur burrows in the geologic record, and documented the best assemblage of polar-dinosaur tracks in the Southern Hemisphere. He is the author of two textbooks on dinosaurs as well as Dinosaurs Without Bonesà Â and lives in Atlanta, GA.

This wonderful book is scientifically sound but written in an entertaining style for the layman, like myself, who is interested in natural history. I highly recommend this book.

A thought provoking look at evolutionary history that is easy to read and well written. After finishing it, I purchased more copies to give away.

I found the writing occasionally amusing, although the author tends to ramble too much for my taste.

I was hoping to learn more about nesting habits of the 3' black snake I see in the yard - no luck.
