E-Z Biology (Barron's E-Z Series)

Synopsis

Known for many years as Barron's Easy Way Series, the new editions of these popular self-teaching titles are now Barron's E-Z Series. Brand-new cover designs reflect all new page layouts, which feature extensive two-color treatment, a fresh, modern typeface, and more graphic material than ever—charts, graphs, diagrams, instructive line illustrations, and where appropriate, amusing cartoons. Meanwhile, the quality of the books' contents remains at least as high as ever. Barron's E-Z books are self-help manuals focused to improve students' grades in a wide variety of academic and practical subjects. For most subjects, the level of difficulty ranges between high school and college-101 standards. Although primarily designed as self-teaching manuals, these books are also preferred by many teachers as classroom supplements and for some courses, as main textbooks. E-Z books review their subjects in detail, and feature both short quizzes and longer tests with answers to help students gauge their learning progress. Subject heads and key phrases are set in a second color as an easy reference aid. Topics covered in Barron's E-Z Biology include the cell, bacteria and viruses, fungi, plants, invertebrates, chordates, Homo Sapiens, heredity, genetics and biotechnology, evolution, and ecology.

For anyone wanting an overview of biology, this book covers many topics including cells, bacteria and viruses, plants, animals, human systems, DNA, and too many others to list. Don't let the title scare you. The concepts and information in the book is at least high school level. It comes with multiple choice, fill in the blank, questions, and vocabulary words at the end of each chapter. The only negative about the book is the list of vocabulary words at the end of each chapter. Very long and some words are not in the chapter. This book is excellent for high school or college students, homeschoolers, or adults who are just interested in learning.

I love this book and all the others Barron's subjects series that I have brought. Barron, so far, is the best I have brought. It is more information than Cliffnotes' booklet. I used both of them together.

Excellent book, as are all the books in this series.

Checked this book out at local library soooooo many times. A must have study guide. We use this for general study for grades 6-12 and sat cramming. It has all the basics

Very detailed and good to use a supplement to curriculum.

help for the kids

Good

I tried to use it to study for clep but I felt it gave a lot of superfluous information. I really liked "biology smart". I passed the clep.
