The Fossil Book (Wonders Of Creation)

Synopsis

Fossils have fascinated humans for centuries. From the smallest diatoms to the largest dinosaurs, finding a fossil is an exciting and rewarding experience. But where did they come from, and how long have they been around? These and many other questions are answered in this remarkable book. The Fossil Book will teach you about: The origin of fossils How to start your own fossil Collection What kinds of fossils can be commonly found The age of fossils How scientists find and preserve fossils How to identify kinds of fossils How the flood affected fossil formation The Geologic Column Diagram The difference between evolutionists' and creationists' views on fossils The "four Cs" biblical creation The different kinds of rocks fossils are found in coal and oil formation Learning about fossils, their origins, and how to collect them can be both fun and educational. The abundance of both marine and land fossils and the locations they are found in is a fascinating subject for students of all ages and has been studied by scientists and laypersons alike for many years. Learn what all the excitement is about!

After starting his 30-year college teaching career as a non-Christian evolutionist, Dr. Gary Parker became a zealous creationist, eventually serving as professor of biology at the Institute for Creation

Research in San Diego, lecturing worldwide for both ICR and Answers in Genesis, writing five science textbooks and seven creation books (translated into over ten languages), and appearing in numerous films, videos, and television programs. Dr. Parker and his wife, Mary, also run family camps, workshops, and credit courses through the Creation Adventures Museum near their home in Arcadia, Florida.

Excellent information and pictures on the wonder of God's creation and what science is learning.

Grandson loves it.

Great series of books for teaching kids about creation, instead of the horrible evolution lie.

This is a great book for kids to understand the fossil's that are found. A great Christian perspective, should buy for children.

A nice big hardcover book on Fossils from a creation world view. It's nice to be able to learn and study about fossils without all the lies and rhetoric of millions of years. Shown from a biblical perspective this book shows many great scientific evidences for a world wide flood. The creation model is by far the best explanation for what we see in our world! I love these books and have learned a lot, but my son also loves reading them with me. Large ages, full color, smooth and glossy.

I am one of the home educators so rudely referred to in one of the previous reviews that has chosen to use this book in my curriculum. I am also a creationist. I am not, however, one who swallows any creationist theory without thoroughly thinking it through and comparing it to both the Bible and to other scientific theories. Evidence is ALWAYS interpreted with some kind of bias. All points of view should be considered, at least briefly. I doubt any one scientist or group of scientists has everything figured out. The history of science will bear that out. If nothing else, reading differing views will help you to refine your own. Having said that, I think this book is spectacular. I thought it was a very respectful and well thought out presentation of the material. When presenting alternative theories in an area that is so hotly debated, with entrenched views on both sides, I believe it is necessary to address the differences in interpretation. The authors have done this very well without being inflammatory or conceited. They simply differ, and explain why very well. They do utilize Biblical worldview just as an evolutionist would refer to evolutionary thinking in any book he/she wrote. The

book is challenging but not overly technical. It made me want to go fossil hunting right away. I think if you are open to creationist theories, or just want to compare them with evolutionary theories, it would be a great place to start. I used it with my daughter in conjunction with a rockhound class she is taking at the local mineral museum. It has been wonderful brain exercise!

Great information and photos. For an amateur paleontologist I was intrigued and challenged to understand the fossil discoveries that exist on this planet. Loved it and plan to buy some more books to further investigate findings in northern Alaska and Siberia. May keep this book as a wish list of places to visit and explore around the world later in life.

The material was factual. The pictures are fabulous. I shared it with my youth scouting club members. I would highly recommend it to everyone who is searching for the truth about fossils.
