The Magic School Bus Lost In The Solar System - Audio

Synopsis

The bestselling science series ever is now available on audio!**FORMAT:** Paperback book & CD
NARRATOR: Multi-voice recording **TBA**The field trip to the planetarium is foiled when the museum turns out to be closed, but Ms. Frizzle saves the day. The Magic School Bus turns into a spaceship and takes the class on a trip zooming through the atmosphere, to the Moon, and beyond! With up-to-date facts about the solar system, revised for this edition.

Book Information

Series: The Magic School Bus

Audio CD: 40 pages

Publisher: Scholastic Audio Books; Pap/Com edition (May 1, 2010)

Language: English

ISBN-10: 0545220882

ISBN-13: 978-0545220880

Product Dimensions: 0.2 x 8.8 x 11.5 inches

Shipping Weight: 7 ounces (View shipping rates and policies)

Average Customer Review: 4.6 out of 5 stars 131 customer reviews

Best Sellers Rank: #319,231 in Books (See Top 100 in Books) #24 in [Books > Books on CD > Children's Fiction > Educational](#) #205 in [Books > Children's Books > Education & Reference > Science Studies > Astronomy & Space > Astronomy](#) #2000 in [Books > Children's Books > Education & Reference > Science Studies > Nature](#)

Age Range: 7 - 10 years

Grade Level: 2 - 5

Customer Reviews

Cole and Degen have already escorted young readers on three enlightening, boisterous rides on the magic school bus--in explorations of the human body, waterworks and the inside of the Earth. This latest expedition, on which the energetic Miss Frizzle offers a tour of the planets, should not be missed. When a closed planetarium disappoints her students on a class trip, the likable teacher saves the day. She manages to launch her rickety school bus into space and steers it around the solar system, visiting the moon, the sun, Mercury, Venus and Mars before an asteroid knocks out one of the taillights. When Miss Frizzle leaves the bus to investigate, she gets lost in space, and the students visit the outer planets without her. They reconnect with her eventually, and the group ends up back in the classroom, making a chart and a mobile based on their discoveries. Once again,

author and illustrator let readers laugh while they learn in an animated, fact-filled adventure. Ages 6-9. Copyright 1990 Reed Business Information, Inc. --This text refers to an out of print or unavailable edition of this title.

The planetarium is closed for repairs, so the Magic School Bus blasts off on a real tour of the solar system. After their previous field trips, the children in Ms. Frizzle's class are all blasé about such things; as they land on the Moon, Venus, and Mars, and fly by the other planets and the Sun, they comment on what they see, generate a blizzard of one- or two-sentence reports on special topics and--even while Ms. Frizzle is temporarily left behind in the asteroid belt--crack terrible jokes ("Could Saturn take a bath? Yes, but it might leave a ring!"). Although some of the information is radically simplified--people are said to float in space because "without a large mass nearby . . . they do not have weight"--Cole keeps the narrative specific without burdening it with loads of facts. Degen's fresh, energetic illustrations complement the breathless pace perfectly. A first-class introduction to the planets, fine for pleasure or purpose reading. --John Peters, New York Public Library Copyright 1990 Reed Business Information, Inc. --This text refers to an out of print or unavailable edition of this title.

A fun story that follows the first episode of the first season of MSB pretty closely, but the extra factual information/dialogue in the margins make it hard to read to ages 4-6 (especially if they suspect you're leaving something out!). It might be more enjoyable for ages 9-10, who can benefit from that info and can read at their leisure.

This was a gift for our grand kids. Their mom says "The Magic School Bus" is a popular series on TV, which I didn't know. The book has apparently been a big hit because of the familiar characters and storyline, and also because of their interest in the solar system! If you like this one, there are others in the series.

My first and still favorite Magic School Bus book! It goes planet to planet (including Pluto) sharing your weight on this planet, and many, many, more interesting facts about each and where it is in our solar system. A must-have for all children's home libraries! A gem for fostering a love of science!

I am impressed with the way the comic-book style of this book can really teach. The pages have the storyline text, and then plenty of puns and quips, some dialog, associated research projects done

by the class, charts, and great illustrations. This is a series, so to get you familiar, Ms. Frizzle is a teacher who takes her class on field trips. Their school bus can change and transport them anywhere, so the field trips end up being real experiences. The books do a tremendous job of carrying the story and the visuals. As a mom, the puns do little for me, but my seven-year-old really likes them and repeats them. Good enough.

Great book with a ton of info. Got it for my 3 year old because he loves space stuff and some of it is a little much for him but he loves reading through the story itself.

Thank you so much. This book was in great condition and loved by a new child.

My son started reading this series at school, he was so interested i've kept buying the next book and he loves reading them. Great book series!

VERY NICE
