Laboratory Manual To Accompany Biology

Synopsis

The Biology Laboratory Manual, Tenth Edition, is written by Dr. Sylvia Mader. With few exceptions, each chapter in the text has an accompanying laboratory exercise in the manual. Every laboratory has been written to help students learn the fundamental concepts of biology and the specific content of the chapter to which the lab relates, and to gain a better understanding of the scientific method.

Book Information

Spiral-bound: 528 pages

Publisher: McGraw-Hill Education; 10 edition (January 13, 2009)

Language: English

ISBN-10: 0077226178

ISBN-13: 978-0077226176

Product Dimensions: 8.9 x 0.8 x 10.7 inches

Shipping Weight: 2.4 pounds

Average Customer Review: 4.1 out of 5 stars 22 customer reviews

Customer Reviews

Sylvia S. Mader has authored several nationally recognized biology texts published by McGraw Hill. Educated at Bryn Mawr College, Harvard University, Tufts University, and Nova Southeastern University, she holds degrees in both Biology and Education. Over the years she has taught at University of Massachusetts, Lowell; Massachusetts Bay Community College; Suffolk University; and Nathan Mayhew Seminars. Her ability to reach out to science-shy students led to the writing of her first text, *Inquiry into Life*, that is now in its thirteenth edition. Highly acclaimed for her crisp and entertaining writing style, her books have become models for others who write in the field of biology. Although her writing schedule is always quite demanding, Dr. Mader enjoys taking time to visit and explore the various ecosystems of the biosphere. Her several trips to the Florida Everglades and Caribbean coral reefs resulted in talks she has given to various groups around the country. She has visited the tundra in Alaska, the taiga in the Canadian Rockies, the Sonoran Desert in Arizona, and tropical rain forests in South America and Australia. A photo safari to the Serengeti in Kenya resulted in a number of photographs for her texts. She was thrilled to think of walking in

Darwin's steps when she journeyed to the Galapagos Islands with a group of biology educators. Dr. Mader was also a member of a group of biology educators who traveled to China to meet with their Chinese counterparts and exchange ideas about the teaching of modern-day biology.

I bought this older edition to save money instead of buying the newest edition. It is very similar to the newer edition as far as content (I compared the 2) but if you are being assigned the questions at the end of each chapter, just make sure the numbers match up. So if your teacher assigns you p.58 ques 1-5 in the newest edition they might be numbered 6-10 in the older edition. Same exact questions just different numbers.

Had to purchase for class. Of course the price is always a shock, but I do feel I got a lot of use out of it. The teacher did modify some of the experiments and have to explain several ambiguous directions, but overall not a bad lab book. I liked the explanations before the experiments, they didn't just stick a bunch of directions and expect you to blindly figure out the concepts. The questions after were helpful and provided a good study guide for lab quizzes. Would recommend.

's the G.o.a.t for having this book at a great price

Missing a few pages.. luckily I didn't need them.

Great book, fast delivery

got me through my bio, used or not

I got one with lot's of writing with pen, and some highlighting. I little bummed, but I am very thankful for the great price and good condition it was in. It did it's job for the semester.

Item shipped with standard shipping and I got it within 3 days! Worn, and has writing but definitely a great steal for the price and edition. It serves the purpose! Will definitely buy again.
