Mokele-Mbembe: Fact Or Fiction? (Creature Scene Investigation)

Synopsis

According to local legend, a modern-day African dinosaur called Mokele-mbembe lurks in the murky waters of the Congo Basin rainforest. This elephant-sized version of Diplodocus kills hippos, elephants, and humans that invade its territory in Lake Tele and vine-choked Likouala Swamp. Many cryptozoological expeditions have been conducted in this inhospitable jungle with the sole purpose of finding a living, breathing specimen of a type of animal that should have gone extinct 65 million years ago. In *Mokele-mbembe: Fact or Fiction?*, take a look at the evidence dinosaur hunters have collected, and decide whether Mokele-mbembe is a real animal or just a figment of the imagination.

Customer Reviews

A good book on this interesting, controversial, and speculative topic. This book offers interesting info on geology, zoology, biology, and of the mystery creatures of course. The book is fun, easy to read, and well researched (as well as a topic like this can be researched). I would be interesting in buying more from this authors series.
