Jesse Hall, MD is Professor of Medicine, Anesthesia, and Critical Care at the University of Chicago Medical Center. John Kress, MD is Professor of Medicine and Critical Care at the University of Chicago Medical Center.

I'm very disappointed. I have spent way too much time in the pathophysiology of circulation chapter because it references figures incorrectly. For example: it says from point D to E in figure 31-8 and there is no point E in figure 31-8! It doesn't explain the figures very well which makes it harder to understand them. I have read books that were much better written and explained. I would save your money and look for another book. Very disappointed that I wasted over \$150 on this book.

An update to editions 1-3). Although edited by one (excellent) physician, this book covers many areas of Critical Care Medicine

Great book! Thorough, yet readable. Very up to date.

The best Critical Care textbook ever!

Just bought the kindle edition; It is a great book, well written, all the contents are up to date an easy to read. I do not know about the on line contents, as far as the kindle edition it works just fine. I really liked the respiratory chapters and the critical care of the surgery patient.

I wish it had an e-book access (such a huge book) . however, amazing textbook .

My favorite bookI have read the previous edition cover to cover and frequently referred to it and hope the new edition will be the same. The first chapter is full of wisdom
