1421: The Year China Discovered America

Synopsis

On March 8, 1421, the largest fleet the world had ever seen set sail from China to "proceed all the way to the ends of the earth to collect tribute from the barbarians beyond the seas." When the fleet returned home in October 1423, the emperor had fallen, leaving China in political and economic chaos. The great ships were left to rot at their moorings and the records of their journeys were destroyed. Lost in the long, self-imposed isolation that followed was the knowledge that Chinese ships had reached America seventy years before Columbus and had circumnavigated the globe a century before Magellan. And they colonized America before the Europeans, transplanting the principal economic crops that have since fed and clothed the world.

A former submarine commander in Britain's Royal Navy, Menzies must enjoy doing battle. The amateur historian's lightly footnoted, heavily speculative re-creation of little-known voyages made by Chinese ships in the early 1400s goes far beyond what most experts in and outside of China are willing to assert and will surely set tongues wagging. According to Menzies's brazen but dull account of the Middle Kingdom's exploits at sea, Magellan, Dias, da Gama, Cabral and Cook only "discovered" lands the Chinese had already visited, and they sailed with maps drawn from Chinese charts. Menzies alleges that the Chinese not only discovered America, but also established colonies here long before Columbus set out to sea. Because China burned the records of its historic expeditions led by Zheng He, the famed eunuch admiral and the focus of this account, Menzies is forced to defend his argument by compiling a tedious package of circumstantial evidence that

ranges from reasonable to ridiculous. While the book does contain some compelling claims—for example, that the Chinese were able to calculate longitude long before Western explorers—drawn from Menzies's experiences at sea, his overall credibility is undermined by dubious research methods. In just one instance, when confounded by the derivation of cryptic words on a Venetian map, Menzies first consults an expert at crossword puzzles rather than an etymologist. Such an approach to scholarship, along with a promise of more proof to come in the paperback edition, casts a shadow of doubt over Menzies's discoveries. 32 pages of color illus., 27 maps and diagrams. Menzies makes the fascinating argument that the Chinese discovered the Americas a full 70 years before Columbus. Not only did the Chinese discover America first, but they also, according to the author, established a number of subsequently lost colonies in the Caribbean. Furthermore, he asserts that the Chinese circumnavigated the globe, desalinated water, and perfected the art of cartography. In fact, he believes that most of the renowned European explorers actually sailed with maps charted by the Chinese. Though most historical records were destroyed during centuries of turmoil in the Far East, he manages to cobble together some feasible evidence supporting his controversial conclusions. Sure to cause a stir among historians, this questionable tale of adventure on the high seas will be hotly debated in academic circles. Margaret Flanagan Copyright © American Library Association. A thorough and almost encyclopedic collection of facts relating to Chinese exploration in the 13th Century.

interesting book

Fascinating book!

I'm still reading the book, but up to this moment i'm liking it very much. Rich on details and the author writes in clear way

Interesting concept with many possible stories.

very good

This is a fascinating and very well researched book that will change history as we have known it!!!

Of course this novel is pure historical poppycock, but it's still a good read. Forget about all the footnotes and references, they mean nothing to such rousing fiction.
