Budget Astrophotography: Imaging With Your DSLR Or Webcam (The Patrick Moore Practical Astronomy Series)

Synopsis

Here are clear explanations of how to make superb astronomical deep-sky images using only a DSLR or webcam and an astronomical telescope – no expensive dedicated CCD cameras needed! The book is written for amateur astronomers interested in budget astrophotography – the deep sky, not just the Moon and planets – and for those who want to improve their imaging skills using DSLR and webcams. It is even possible to use existing (non-specialist astronomical) equipment for scientific applications such as high resolution planetary and lunar photography, astrometry, photometry, and spectroscopy. The introduction of the CCD revolutionized astrophotography. The availability of this technology to the amateur astronomy community has allowed advanced science and imaging techniques to become available to almost anyone willing to take the time to learn a few, simple techniques. Specialized cooled-chip CCD imagers are capable of superb results in the right hands – but they are all very expensive. If budget is important, the reader is advised on using a standard camera instead. Jensen provides techniques useful in acquiring beautiful high-quality images and high level scientific data in one accessible and easy-to-read book. It introduces techniques that will allow the reader to use more economical DSLR cameras – that are of course also used for day-to-day photography – to produce images and data of high quality, without a large cash investment.

Book Information

File Size: 18311 KB

Print Length: 247 pages

Publisher: Springer; 2015 edition (October 25, 2014)

Publication Date: October 25, 2014

Sold by: Amazon Digital Services LLC

Language: English

Customer Reviews

This is exactly what I was looking for. The book is easy to read and loaded with practical knowledge.

Excellent book for anybody wanting to get a good basic understanding of how to take astrophotography shots. And it helps to understand filters, DSLR setups and expectations.

Very informative and highly recommend.
